

# Guide to Location Sharing “While Using” on iPhone

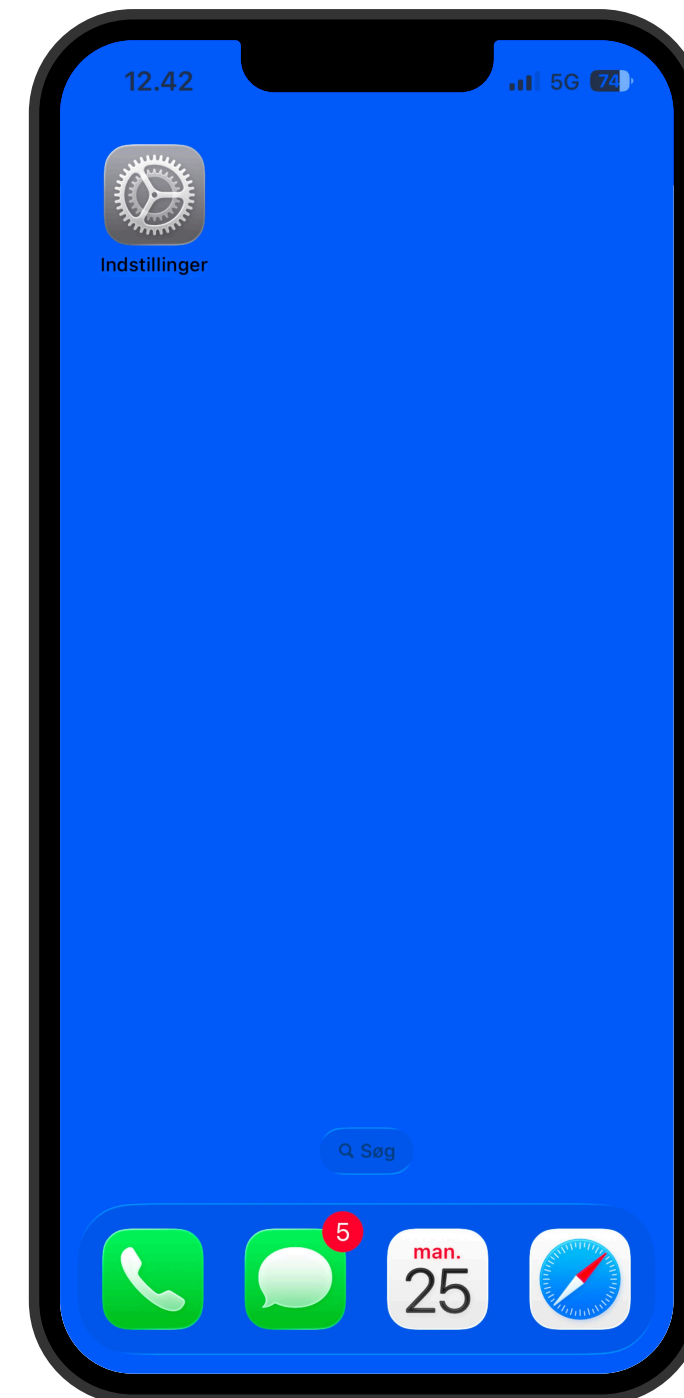

To change your location sharing on iPhone, you need to:

- 1 Go to Settings
- 2 Click on Apps
- 3 Click on Location

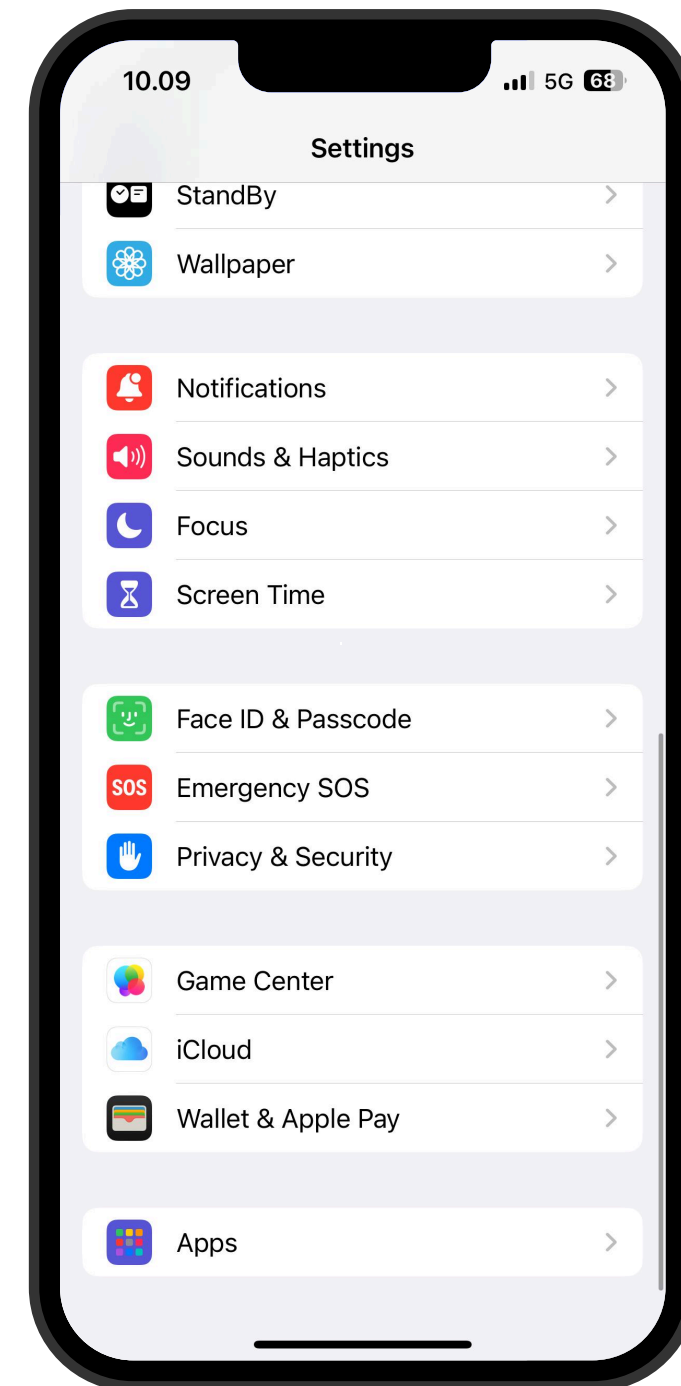

## Go to Settings

On your phone you click on the icon for Settings

## Click on Apps

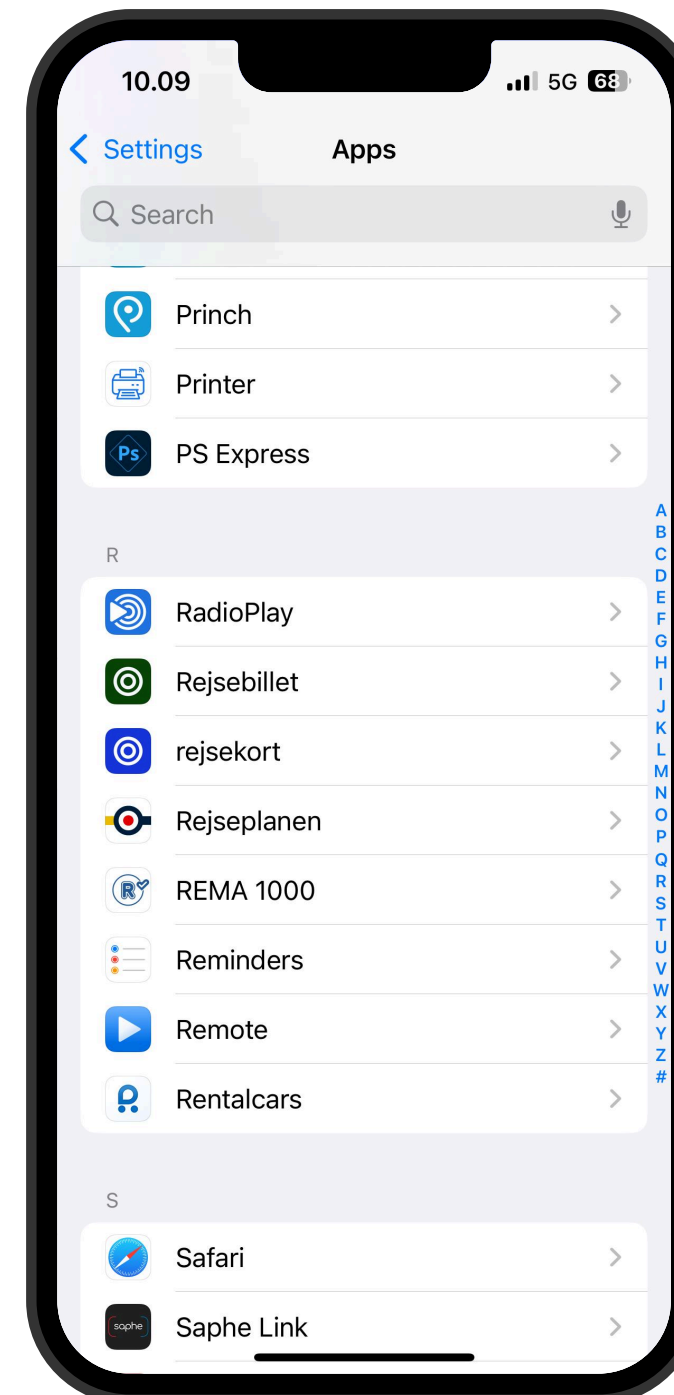

In Settings, select the Apps field (shown here at the bottom of the screen).

## Find the rejsekort field

You can either tap "R" in the alphabet on the far right or scroll down to the section for apps starting with R.

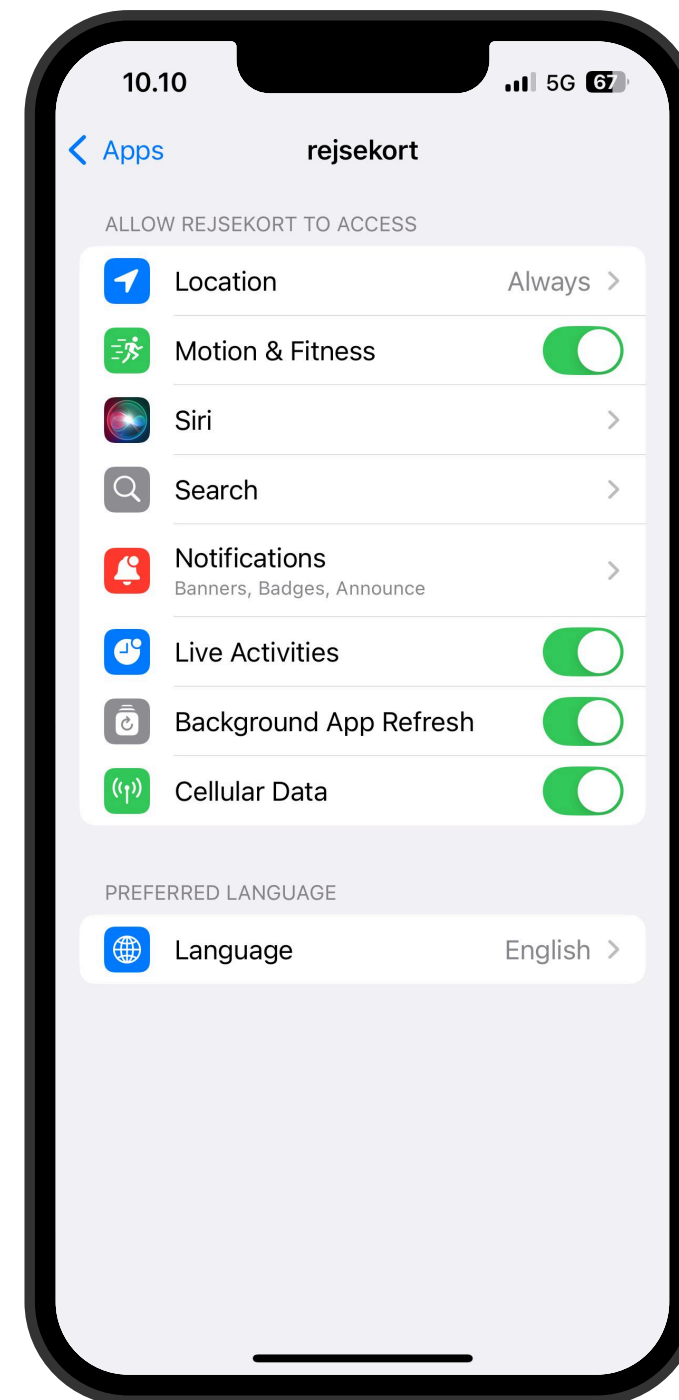

Select rejsekort.

## Go to Location

At the top of the screen, you will find the Location field.

Select Location to choose which location sharing the Rejsekort app is allowed to access.

## Chose Location While using the app

On the Location page, you will see the four options you have for location sharing.

Right now, there is a small blue check mark next to 'Always', as this has been required in order to travel with the Rejsekort app until now.

Click on the line While using the app, so the small blue check mark appears next to the text.

Remember that Precise location must always be green.

Close Settings again, and you are ready to travel with the Rejsekort app.
